Education

Carnegie Mellon University, Bachelor of Science in Computer Science, Minor in Software Engineering May 2025

Skills

Python, C, JavaScript, TypeScript, AWS, Go, React, Rest, Kubernetes, Postgres, Object-Oriented Programming, HTML, CSS, Functional Programming, Parallel & Concurrent Programming, LLMs, CI/CD, Agile/Scrum, Git, SML, Embedded Systems, Networking, Linux, Windows, Problem Solving, Teamwork, Written and Verbal Communication, Creativity, Time Management

Work Experience

Coteach, ***Full Stack Software Engineer*** Apr. 2026 - Present

- Taking ownership of full-stack product features at Coteach, helping drive them from user discovery and technical design through React/TypeScript frontend work, backend/API development, database changes, production launch, and iteration
- Partnering directly with teachers and school users through discovery calls and feedback sessions, translating classroom needs into engineering priorities and validating product hypotheses with real users

Lockheed Martin Space May 2024 - Apr. 2026

Full Stack Software Engineer, National Security Space, active Top Secret SCI w. Polygraph clearance

- Specific details are withheld due to the highly classified nature of the program I worked on. In general, this job required:
  - Python, React, Rest, AWS, TypeScript, DevSecOps, Docker, Kubernetes, Agile, Postgres, peer reviews, and more
  - Safeguarding the nation and its allies from highly dangerous threats, speaking to government officials, and more
- Taking ownership of some of the customer's highest priority feature requests and consistently completing more story points than assigned

Embedded Software Engineer, active DoD Secret Clearance

- Solo-developed a classified testing suite in C, integrating over 10 different unrelated systems and accelerating the team's timeline by 3+ months
- Resolved a critical system-integration issue using PuTTY alongside communication interfaces like UART, USART, SPI, I2C, CAN busses, etc.

Carnegie Mellon University Human-Computer Interaction Institute, ***Research Assistant*** May 2024 - Apr. 2026

- Developed Python software that visualizes and audits AI image datasets for bias and discrimination, using natural-language and clustering

MIDL Technology, ***Full Stack Software Engineer*** Jun. 2023 - Aug. 2023

- Engineered a security alert system with ReactFlow and Next.js, enabling 100,000+ event chains that trigger security responses
- Built a secure check-in application for visitor-kiosks, enhancing 1,000+ kiosks used by universities, companies, and other users
- Created new features for the admin dashboard, like enhanced audit logs, object-filtration charts, and more for 100's of admins

Projects and Papers

- **Incentives Map (TypeScript):** Volunteered for Rewiring America by developing an interactive coverage map that connected to their API
- **Malloc (C):** Implemented a custom memory allocator, resulting in a mean utilization of 83.4% and throughput of 7295
- **Power Method, QR Method, & Deflation (Julia, LaTeX):** A mathematical research paper on advanced linear algebra / matrices
- **Emotional Stimuli and Beyond (Python, LaTeX):** A paper analyzing LLM performance due to emotional prompt engineering

Awards, Honors, and Extracurriculars

- **Boeing STEM Scholarship:** Awardee. In recognition of impressive STEM accomplishments in college and high GPA
- **CMU Student Leadership Recognition Award:** Awardee. Recognized for my positive and lasting impact on all of campus
- **2025 Carnegie Mellon Graduation Event Speaker:** Speaker. Spoke about my leadership on campus, and the communities I fostered
- **Habitat for Humanity:** Former Trip Coordinator and Board Member. Habitat doesn't just build houses — we build homes.
